

HR Portal

Product Requirements Document (PRD)

Product: WOWAYS HR Management System · Enterprise HRMS

Version: 1.0 · **Status:** Live in Production

Date: July 2026

Platform: Web (Next.js + Firebase)

Prepared for: WOWAYS

Table of Contents

13. Assumptions, Constraints & Future Scope

1. Executive Summary

The **WOWAYS HR Portal** is an enterprise-grade Human Resource Management System (HRMS) delivered as two connected web applications sharing a single Firebase backend. It digitises the complete employee lifecycle — from recruitment and onboarding through attendance, leave, payroll, performance and offboarding — while giving employees a self-service portal for their personal data, attendance, leave, payslips and goals.

Two applications, one source of truth:

- **HR Admin Dashboard** — the control centre used by HR administrators to manage the entire workforce.
 - **Employee Self-Service Portal** — a focused portal where employees view and update their own information.
- Both apps read/write the same Firebase project, so every change is reflected across the system in real time.

2. Product Goals & Objectives

Goal	Description
Centralise HR operations	Provide a single system for all employee data, replacing spreadsheets and disconnected tools.
Enable employee self-service	Let employees manage their own profile, leave, attendance and documents without HR intervention.
Real-time synchronisation	Changes made by HR (leave approvals, goals, notifications) reflect instantly on the employee side.
Data accuracy & compliance	Structured records for statutory data (PAN, Aadhar, PF, UAN) with role-based access control.
Fast, responsive experience	Cache-first loading with skeleton states so pages render instantly on repeat visits.

3. Target Users & Personas

3.1 HR Administrator

Manages the full workforce: creates employee accounts, approves leave, runs payroll, tracks recruitment and monitors attendance and performance across the organisation.

3.2 Employee

Uses the self-service portal to view their profile, clock attendance, apply for leave, download payslips, track goals and upload personal documents.

Capability	HR Admin	Employee
Manage all employee records	✓	—
View / edit own profile	✓	✓ (own only)
Approve / reject leave	✓	— (apply only)
Run payroll	✓	— (view payslip)
Recruitment & hiring	✓	—
Assign goals	✓	Update progress
Send announcements	✓	Receive

4. System Architecture

Layer	Technology
Frontend framework	Next.js 16.2 (App Router) with static export (output: "export")
Language	TypeScript, React 19
Styling	Tailwind CSS
Charts & data viz	Recharts
Icons	Lucide React
Spreadsheet import/export	SheetJS (xlsx)
Authentication	Firebase Authentication (Email/Password)
Database	Cloud Firestore (NoSQL, real-time)
File storage	Firebase Storage (photos, documents, certificates)
Hosting	Firebase Hosting — two sites, one project

Deployment topology: A single Firebase project (hrmanagement-6b903) backs two hosting targets — the HR dashboard (hrmanagement-6b903.web.app) and the employee portal (woways-employee.web.app). Both share the same Firestore database, Storage bucket and Auth user pool, keeping the two apps perfectly in sync.

5. HR Admin Dashboard — Functional Requirements

5.1 Dashboard / Overview

- KPI cards: total employees, interns, active, on probation, on leave, exited.
- Attendance overview: present, absent, late logins, half-day, average working hours (today).
- Leave summary (pending / approved / rejected) and goal completion breakdown.
- Charts: department-wise headcount, 6-month leave trends, monthly hiring trend.
- Live clock and personalised welcome header.

5.2 Employee Directory </dashboard/employees>

- Add, edit, view and delete employees via a multi-tab form (personal, employment, statutory, education, documents).
- Auto-generated employee IDs (EMP001, EMP002 ...) and automatic Firebase Auth account creation with generated credentials.
- Profile photos, searchable/filterable list by department, bulk CSV/Excel import, and export.
- HR-managed document uploads (offer letters, internship letters) per employee.

5.3 Attendance & Time </dashboard/attendance>

- Daily attendance logs, live clock-in/out records and regularisation requests.
- Status tracking: Present, Absent, Half-Day, Late, Week Off; working-hours calculation.

5.4 Leave Management </dashboard/leave>

- Real-time queue of leave requests with approve / reject actions.
- Leave types (Casual, Sick, Emergency), medical-proof attachments, and status sync back to the employee.

5.5 Payroll & Compensation </dashboard/payroll> · </compensation>

- Salary table, monthly payroll runs, CTC management and incentives.
- Payslip generation available to employees for download.

5.6 Recruitment & Hiring </dashboard/recruitment> · </hiring>

- Candidate pipeline / applicant tracking (ATS), job postings and sourcing channels.

5.7 Performance & Goals </dashboard/goals> · </performance>

- Assign goals/KPIs, track status (Not Started, In Progress, On Track, At Risk, Completed) and record performance reviews.

5.8 Onboarding, Documents, Reports & Admin

- **Onboarding** — new-hire checklists.
- **Documents** — central document repository.
- **Reports & Analytics** — workforce analytics and exports.
- **Admin & Access** — role assignment and access control.
- **Notifications** — company-wide and targeted announcements.
- **Help & Support** — employee query inbox.
- **Settings** — organisation configuration, holidays.

6. Employee Self-Service Portal — Functional Requirements

Module	Capabilities
Dashboard	Personal overview, today's clock-in status, leave balance summary, live clock.
My Profile	View/edit personal info, upload profile photo, education, work experience, skills, government IDs (HR-locked where applicable), documents.
My Attendance	Monthly attendance log and working-hours history.
My Leave	Apply for leave, attach proof, and track request status in real time.
My Payslip	View and download monthly payslips.
My Goals	Track assigned goals and update progress.
Calendar	Month view with company holidays highlighted and today marked.
Notifications	Company announcements and personal alerts with unread badges.
Compensation	Personal compensation and incentive records.
Help & Support	Raise queries to HR with optional attachments.

7. Data Model — Firestore Collections

Collection	Purpose
employees	Master employee records (doc ID = employee ID, e.g. EMP003). Includes profile, statutory data, photo URL, skills, work experience.
users	Auth-linked profiles mapping Firebase UID → employeeId and role.
attendance	Daily check-in/out records (doc ID = date-empId).
clockRecords	Raw clock-in/out event log.
regularization	Attendance correction requests.
leaveRequests	Leave applications with real-time status sync.
goals / personalGoals	Assigned KPIs and personal goals.
performanceReviews	Performance review records.
payroll	Monthly payroll records (HR-write).
compensation / incentives	Salary and incentive data.
candidates / jobPostings	Recruitment pipeline and open positions.
onboarding	New-hire checklists.
documents / employeeDocuments	Uploaded document metadata (HR + employee).
notifications	Announcements and alerts (real-time).
helpQueries	Employee support tickets.
settings	Organisation config incl. holidays.

8. Authentication & Authorization

- **Auth method:** Firebase Email/Password with local persistence.
- **Account provisioning:** HR creates an employee → a Firebase Auth account is generated with credentials, and a `users/{uid}` document links the UID to the employee ID.
- **Identity resolution:** The system resolves an employee's Firestore record by email lookup (most reliable) with a fallback to `users/{uid}.employeeId`.
- **Role-based rules:** Firestore security rules enforce that employees access only their own leave/payroll/profile data, while HR admins (identified by a role claim / users-doc role) have broader access. All access requires authentication.
- **Storage rules:** Profile photos, documents, certificates and attachments are readable/writable only by authenticated users.

9. Non-Functional Requirements

Attribute	Requirement
Performance	Cache-first rendering; pages show cached data instantly then refresh in the background. Skeleton loaders during first load.
Availability	Served via Firebase Hosting CDN with global edge distribution.
Real-time	Firestore <code>onSnapshot</code> listeners for leave, goals, notifications and sidebar profile data.
Security	Firestore + Storage rules; secrets kept in <code>.env.local</code> (never committed).
Responsiveness	Tailwind-based responsive layouts across desktop and tablet.
Maintainability	Shared service layer (<code>firebaseService</code> , <code>cachedService</code>) and typed models.

10. Caching & Performance Strategy

- **Session cache:** Frequently viewed lists (e.g. employees) and sidebar identity are cached in `sessionStorage` and rendered immediately on load.
- **Cache-then-network:** The cached service returns a cached value first (instant paint), then re-fetches from Firestore and updates both the UI and the cache.
- **Skeleton components:** Dedicated skeleton loaders (header, stat grid, chart, card) prevent layout shift during first fetch.
- **Cache invalidation:** Any create/edit/delete re-runs the loader, which rewrites the cache, so it never goes stale.

11. Design System & Branding

Token	Value / Usage
Brand navy	<code>#0B1929</code> — sidebars, dashboard headers, primary surfaces.
Brand teal accent	<code>#14B8A6</code> — "WAYS" logo, highlights, accent lines.
Purple (legacy accent)	<code>#4F3CC9</code> / <code>#EDE9FF</code> — buttons, active states in content areas.
Logo	Wordmark "WOWAYS" — white + teal on navy sidebar.
Typography	System sans-serif (Segoe UI / system stack).
Components	Rounded cards (2xl radius), soft shadows, badge pills, avatar with initials fallback.

12. Deployment & Infrastructure

- **Build:** Next.js static export (`next build` → `out/`) for each app.
- **Hosting:** `firebase deploy --only hosting` deploys both sites from the HR dashboard directory (multi-target config).
- **Sites:** HR → `hrmanagement-6b903.web.app` ; Employee → `woways-employee.web.app` .
- **Config:** Firebase credentials injected via `NEXT_PUBLIC_*` environment variables; both apps use the same project.
- **Rules deployment:** Firestore and Storage rules versioned in the repo (`firestore.rules` , `storage.rules`).

13. Assumptions, Constraints & Future Scope

Assumptions

- Single organisation (WOWAYS); one Firebase project per deployment.
- Employees receive credentials created by HR; email/password is the only auth method.

Constraints

- Static export — no server-side rendering or server API routes; all logic runs client-side against Firebase.
- Statutory features (PF/tax) are record-keeping, not a certified payroll engine.

Future Scope

- Push/email notifications, biometric/geo attendance, mobile app.
- Advanced analytics & AI insights, multi-tenant support, SSO.
- Automated payslip PDF generation and statutory filing exports.
